1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. Note that the Abstract is limited to 150 words.
3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references cited on the PTO-892 teach other gate valve structures.
4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

With respect to claim 14, Authorization for this examiner's amendment was given in a telephone interview with Ms. Beverly M. Bunting on 11/19/2005.

The application has been amended as follows:

In claim 14:

Line 1: "1" has been changed to -- 12 --.

In the Abstract:

The Abstract submitted 10/22/2003 has been deleted and substituted by the following - -

#### ABSTRACT OF THE DISCLOSURE

A lockout valve having a body with an inlet conduit, a central chamber, an outlet conduit, a continuous passageway, and a slide mechanism disposed in a slide channel to control flow between an open, an intermediate and a closed position. The slide includes a plurality of flow apertures. The front side of the slide includes a detent slot and the back side a longitudinally extending override slot having an upper portion positioned opposite the detent slot to form a continuous opening, and a lower portion that does not form a continuous opening. A detent lever for overriding the intermediate position of the slide includes a finger member extending from an edge, and a ball member positioned between a spring and the lever within a recess. Actuation of the detent engages the finger within the slot to push the ball into the recess so that the slide bypasses the intermediate position.

--.

5. The following is an examiner's statement of reasons for allowance: The prior art of record does not teach the specific structure of a valve body with a transverse slide mechanism with a plurality of flow apertures and flow positions, a slide channel, a detent slot, and override slot, a detent override lever, a ball and a spring member as claimed wherein the intermediate position can be skipped by pressing the override lever.
